LISTING OF THE CLAIMS

## Claims 1 – 40 (Cancelled)

41. (Currently Amended) A method for transforming and canonicalizing semantically structured data, the method comprising the steps of:

5        using a user interface having a voice portal to obtain data from a network of computers, wherein said step of using a user interface having a voice portal to obtain data comprises sending voice command to said network of computers, wherein said user interface further comprises at least one of the steps of:

      identifying said a user with a phone number;

10      starting a new session for said user;

      adding a new interaction;

      updating a preference of said user within a domain;

      enabling said preference of said user within said domain;

      disabling said preference of said user within said domain;

15      updating an expertise level of said user;

      updating personal information of said user;

      updating session state of said user;

      adding credit card information of said user; and

      updating said credit card information of said user;

20      applying text patterns to the obtained data and placing the obtained data in a first data file;

      providing a second data file containing the obtained data in a uniform format; and

25      generating grammatical sentences from the obtained data according to a specific user interface in the second data file.
